1617 , OM 355 - 362 , OM
366/A/LA

The working principle of compressors varies depending on their type. Compressors, which generally operate on the principle of compression, ensure that air is compressed at certain rates. Depending on the compression ratio, the pressure value of the air increases.

Compressors that work according to the blowing principle are divided into two types.

Centrifugal turbine type (centrifugal turbo) compressors
Axial turbine type (axial turbo) compressors
